Subject Index to Volume 1

a.c. Susceptibility, 191
Accelerators, 377
Analog-to-digital converter, 365
Application of superconductors, 395

$Ba_2Cu_3O_{5+\delta}$, 451
$BaCuO_2$, 451
Band structure, 175
Barium precursor, 153
Baseline hysteresis, 451
Bismuth–Strontium–Calcium–Copper–Oxide, 191

Ceramic, 211
Charge density, 111
Chlorine doping, 417
Coherence length, 143
Coulomb potential, 111
Critical current density, 45
Cryocoolers, 197
Crystal growth, 181
Crystal growth structure, 211

DCFP, 441
Density of states, 111
Depth profiling, 313
Developing countries, 395

Effective mass, 143
Elastic backscattering spectroscopy (EBS), 303
Electrical resistivity, 45, 63
Electron paramagnetic resonance (EPR), 63
Electron–phonon coupling, 327
Electron–phonon interaction, 111, 175
Electronic band structure, 111
Electrostatic bonding, 295
$ErBa_2Cu_3O_7$, 35, 81
Erbium–Barium–Copper–Oxide, 313
Evaporation, 303
Explosive consolidation, 3

Fermi energy, 143, 327
Fermi energy surface, 111, 143
Fermi energy velocity, 143
Films, 295, 303
Fluorine doping, 417

Generators, 395

High resolution electron microscopy, 21
High temperature, 165, 295, 377
High temperature oxide, 327
High temperature superconductivity, 89, 191, 231, 349, 407
High temperature superconductors, 197
Hot pressing, 45

Inductive logic device, 441

Josephson junction, 441

$La_{1.8}Sr_{0.2}CuO_4$, 143
La_2CuO_4, 165
Lanthanides, 427
LAPW method, 111
Liquefiers, 197
Logic, 365
Logic device, 441

Maglev, 339
Magneplane, 339
Magnetic field effects, 191
Magnetic field levitation, 339
Magnetic separation, 339
Magnetic field susceptibility, 63
